expenses

1. **The pie chart shows my weekly expenses**

The pie chart shows the expenditure of pocket money on various items. I spend 35% of my pocket money on food, 45% on education, 10% on clothing, 5% on savings, 5% on miscellaneous things. With all the expenditure, I can save 5% of my pocket money in the week.

I was spending my money wisely. Food and education play an important role in life. Spending 10% on clothing and 5% on miscellaneous is also reasonable. With all the expenditure I can save 5% of my pocket money every week.

In conclusion, this pie chart shows the expenses I was spending each week.

2.

The bar graph shows the number of runs each player has scored.

The bar graph shows the run scored by each player during a match. The player R has scored 20 runs, player S has scored 56 runs, player T has scored 72 runs, player U has scored 10 runs, player V has scored 45 runs, player W has scored 90 runs in a match. The player W has scored the highest in the match after him the player T has scored the second-highest then the third-highest is player S. the 4th,5th,6th positions are players V, R, U. They have secured a score of 293 in an overall match. Which is a perfect score for 6 players.

The player W had played an essential role in hitting a score of 90 which had bought the total score nearer to 300. He is the strength of the team. R, U have to train harder for the further matches because they had scored only 30 runs which is a poor performance compared with the other player each one player had scored more than 30 runs in the match.

if they won't give their best performance then the team will get the bad result as this match.
